

Check how many bulbs are in your headlight enclosure. Some motorcycles have 2 bulbs which would necessitate that each bulb has its own ballast (e.g. BMW GS 1200 has a H7 bulb for the low beam and a H7 bulb for the high beam while a KTM LC8 has a H7 for low and H3 for high).

If your bike has separate low and main beam bulbs e.g. H1,H3, and H7 then 1 kit will replace the low or high beam only.

In the case of 2 bulb configurations we would recommend that you only convert the low beam due to the efficiency of the HID system. Converting both beams not only doubles your cost but would in our opinion be an overkill.

Should you wish to convert both beams you will be required to purchase 1 kit per beam.

- Price per single beam (H1 , H3 ,H7) R986.10 Vat Inclusive
- Door to Door courier service to major centers R95.50 Vat Inclusive (call or e-mail for outlying areas)

For headlamps with a single bulb (e.g. BMW GS 650 has a single H4 bulb) our Bi-xenon kits use a single xenon lamp and ballast to produce both the high beam and the low beam. Only one kit needs to be purchased for this configuration

- Price per H4 dual beam R1453.50 Vat Inclusive
- Door to Door courier service to major centers R95.50 (call or e-mail for outlying areas)

Always check your bulb type by referring to your bulb, owner's manual or dealer.

The following should also assist:

H1  		H3  	
H3  		H4  	
9005 or HB3  		9006 or HB4  	
9007 or HB5  		H7  	
H8  		H9
