

SW-MOTECH offers the most complete range of **mirror wideners** available. **SW-MOTECH mirror wideners** provide a better view of the traffic behind you, making your ride much safer. All **mirror extensions** are produced by CNC milling.

The **Profile Mirror Extensions** are produced from nylon while the rest of the line is produced from anodized aluminium.

SW-MOTECH uses different technologies to provide solutions for a variety of mirrors. Examples of the **mirror extensions** are shown below.

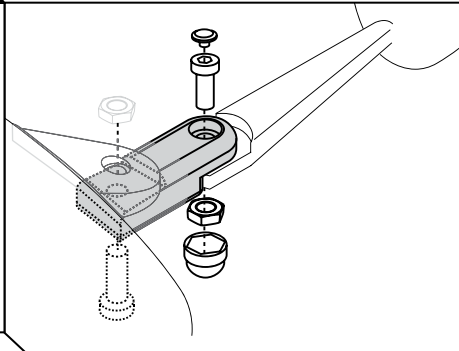

All Extensions have German certification except for the **Hinge Mirror Extension**.

**HINGE** mirror extension

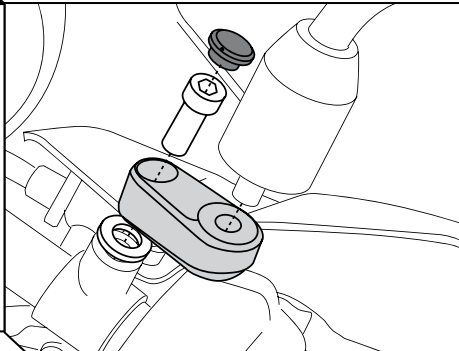

**HINGE mirror extension** is mounted between the socket and the mirror arm. It increases the height by 40mm so there are more adjustments for your mirror.

**HINGE II** mirror extension

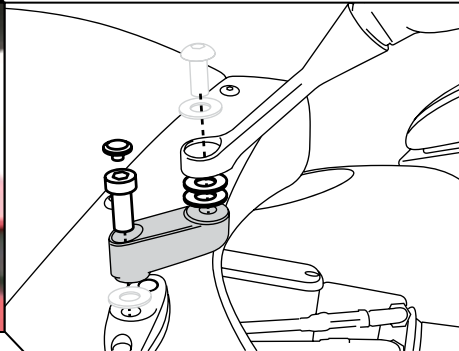

**HINGE II mirror extension** works with some older Honda Motorcycles. (Deauville, VTR 1000F)

**UNIVERSAL**

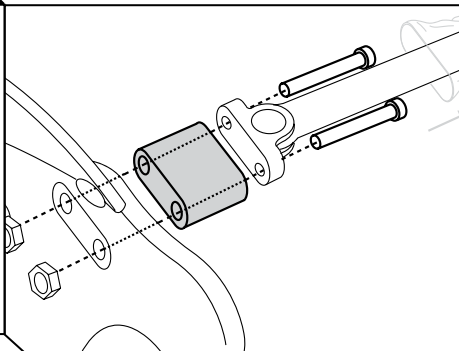

**UNIVERSAL mirror extension** is for standard handlebars with M10 threads. This type is very useful for Enduros and Naked Bikes.

**LINK** mirror extension

**LINK mirror extension** Works with many of the new Honda motorcycles with fairings.

**PROFILE** mirror extension

**PROFILE mirror extension** fits directly to the original profile of the mirror base.
